// EXPERIENCE

Software Developer • AUG 2023 – DEC 2025 Volvo Cars

- 89% faster troubleshooting — an AI agent for test workflows using structured chunking + Map-Reduce over DLT logs; ~5 hours to 40 minutes.
- 50% less manual intervention in requirement-document audits, via an LLM multi-agent system that scores and suggests fixes.
- Rebuilt the US-region brand site: dynamic route loading (–35% FCP) and a CDN (–20% LCP), for a 12% lower bounce rate.
- PM on an LLM + legacy voice-control PoC across Shanghai teams; hybrid intent recognition reached 82% semantic accuracy.

Research Assistant • MAY 2022 – AUG 2022 Carnegie Mellon CyLab

- Deployed vulnerability-detection models on GCP with PyTorch; +19% performance via hyper-parameter tuning and variable obfuscation.

KOTLIN

Software Engineer -
Glinsun AI

MAY 2021 – NOV 2021

- Real-time C++/CUDA cloth-simulation engine with 10 engineers; added fluid, smoke, air-inflation and two-way coupling.
- Unified particle model cut data duplication 50%, holding 60+ FPS across millions of particles in parallel.
- Semi-supervised human-body-measurement system in PyTorch; 87% F1 on 6,000 images.

// SELECTED PROJECTS

Showroom amoschenzixuan.github.io/projects
→

- BibiLab — A local, private NotebookLM for video — turn videos & playlists into a searchable, citation-backed AI notebook. No cloud.
- LogSum — Turns a multi-gigabyte vehicle log into a one-page 5W1H incident report. Deterministic core, bounded memory — the LLM is optional.

// EDUCATION

M.S. Electrical & Computer
Engineering

Carnegie Mellon University
MAY 2023 · GPA 3.72/4.0

B.S. Computer Science

University of California,
Irvine
DEC 2020 · GPA 3.96/4.0 ·
Summa Cum Laude
